

Data Lab: See what's working before you have to ask.

Stop waiting on someone else's report cycle. Build the exact view of your program you need, and watch it update as the program performs.

Data Lab is impact.com's real-time custom report builder. Drag and drop your way to any table or visualization, built from your live program data. No analyst queue, no delay. Share, schedule, or export it in one click, so your whole team works from the same live numbers.

Stay in complete control

Take matters into your own hands. Build your own dashboards in minutes, with over 15 visualization types and zero code. A question about your program shouldn't sit in someone else's queue. Now it doesn't.

Share data anywhere

Share, schedule, and download reports as PDF, CSV, or Excel, straight from real-time impact.com data, so your teams always work from the same up-to-date numbers, which means better collaboration and sharper decisions.

See it your way

Every role looks at the program differently. Tailor custom views by role, so no one has to dig through a dashboard built for someone else's job.
